

# COLDFLEX HOSE

## Also called:

PVC HOSE, REINFORCED HOSE

## Similar to:

RUBBER HOSE

## SUITABLE FOR:

- Compressed Air

## PRESSURE RATING:

- 1000kPa

## JOINTING METHODS:

- Hose Barb, hose clamp

## ADVANTAGES:

- Flexible tubing
- DIY Friendly
- Will not corrode
- UV-stable

## DISADVANTAGES:

- Higher material cost
- Requires extra support
- Requires labelling to comply with AS1345 for pressure pipe identification
- Not for long runs
- Can create a tripping hazard

## Sizes - measure

### Inside Diameter (ID):

- 1/4"
- 3/8"
- 1/2"
- 3/4"
- 1"

### Lengths:

- Sold per metre
- Bought in 20m rolls

**Short Description:**

The coldflex hose system is designed for connection to tools and machinery in a workshop environment from an existing compressed air mains. While it can create a tripping hazard, the system if installed properly is otherwise perfectly suitable for use in tyre shops, workshops, and production facilities.

This system should not be used for long runs due to tripping hazards, the potential for water to pool up in low areas, and the potential for pressure drop across long distances.
